

# Solutions for Data

## BIG DATA

Big Data is here. And, at CSpring our consultants are among the most seasoned in the industry. They have the knowledge you need to extract maximum value from your data. From creating platforms that rapidly deploy big data solutions to implementing industry standards such as Hadoop, our experts have the know-how to manage your big data assets.

## ANALYTICS AND VISUALIZATION

Trending, machine learning, analytics, visualizations- in the past these terms were for statisticians and mathematicians. Today these practices are a standard part of your business tool set. Let CSpring help you master these tools and use them to make your data meaningful. Our experts can lead you through the complexities of data science- the science of statistics combined with the art of making better decisions.

## DATA WAREHOUSING AND BUSINESS INTELLIGENCE

Easy access to accurate data represents one of the greatest opportunities to drive bottom-line results. Our consultants have developed proprietary solutions that can greatly reduce the complexity of your system, giving you access to the information you need, confidence in its accuracy and security, and an expert hand in using it to achieve success. The experts at CSpring deliver data warehousing and business intelligence solutions that will help you meet your organization's reporting and analytics goals.

## COMPETENCIES

Big Data Management  
Big Data Analytics  
Data Architecture  
Data Integration  
Data Warehousing  
Data Modeling  
ETL

IT Assessments & Roadmaps  
Reports Development  
Hadoop  
Business Intelligence  
Data Science  
Data Quality  
Data Governance

“As CSpring, we don't just work with your data, we shape it to tell a story - both of what has happened and what can happen. Together, we navigate the road to data-driven success.”

~ Alex Meadows,  
Principal Consultant, Data  
and Analytics
