Solutions
for Business

PROJECT MANAGEMENT

Good Project Management is about ensuring not only the successful completion of the your project but also the adoption of the solution by your organization. With over 15 years of experience, our skilled team will work to bring the right blend of Agile, Iterative and Waterfall SDLC concepts to the project, ensuring that solution execution is balanced and appropriate.

ANALYSIS

An understanding of the business processes, goals and constraints of your organization is important to understanding the success criteria for a solution. Our team has developed a Software Assessment Framework that has proven to save our clients time and money by ensuring systems decisions are based on objective business requirements and capabilities rather than assumptions driven solely by technology.

CLOUD AND COLLABORATION

Collaboration platforms frameworks initially emerged on corporate enterprise servers and are rapidly moving to cloud-based solutions. Our experienced team of collaboration architects provides expertise in overall solution design and workflow to allow business units and people to work together more efficiently and effectively, increasing productivity while decreasing project durations, work time, and costs.

" *My primary goal is to ensure a successful alignment between business and IT organizations. Through good conversation (and occasionally healthy conflict) my team delivers consensus and common goals – supporting healthy projects and creating a unified team from the silos that interrupt the adoption of change.*"

*~ Kristi Dwenger-Bourgeois
Director of Business Consulting*
